

At Veson Nautical, client value is the star that guides all that we do. That's why we develop and release more than 500 new features each year to meet the evolving needs of our vast, global client community. Once released, many of these capabilities are automatically added to our dynamic, cloud-native platform where they can benefit clients.

## Enhanced Time Charter LNG Tracking

Tracking the right unit of measure is important for LNG—operationally, it is tracked in volume (M3) but commercially, LNG is valued in energy (MMBTU's.) The Time Charter Contract has been updated to reflect the M3 to MMBTU conversion so that the right delivery and redelivery information (heel) can be easily viewed and invoiced without the need for off system calculations.

### Enhanced Modules

### Do these enhancements apply to you?

Ask yourself these questions to determine how your organization will benefit from these additions to the Veson IMOS Platform:

- ✓ Are you involved in the shipping of LNG and do you have LNG Vessel Time Charter contracts?

## The Challenges

Charterers want to know the commercial value of LNG on TC contracts.

1

Gain better insight into commercial value of remaining LNG heel.

Invoicing and settlement workflows use both M3 and MMBTU measures of LNG.

2

An enhanced invoicing workflow avoids the need to manually convert from M3 to MMBTU.

## Take advantage of the latest platform features.
