

At Veson Nautical, client value is the star that guides all that we do. That's why we develop and release more than 500 new features each year to meet the evolving needs of our vast, global client community. Once released, many of these capabilities are automatically added to our dynamic, cloud-native platform where they can benefit clients.

Improved Usability of the VIP Laytime Calculator

The VIP Laytime Calculator has been enhanced to better accommodate the additional complexity of multi-cargo portcalls. This improved user experience reduces data entry and correction, lessens the time it takes to complete a calculation, and allows for more flexibility in what each analyst sees on the screen.

Enhanced Modules

Do these enhancements apply to you?

Ask yourself these questions to determine how your organization will benefit from these additions to the Veson IMOS Platform:

- ✓ Do you track multiple cargo handlings at a single port call?
- ✓ Do you have overlapping port activities for those cargo handlings?
- ✓ Would you like more control over the cargo information visible in the Laytime Calculator?

The Challenges

Need to keep port activities in sync with each other across multiple tabs for the same portcall; one for each cargo handling line.

Must switch between each different port activities tab to see and enter allocation data per cargo.

Calculation report is too long and confusing to be shared with counterparties.

The Features & Benefits

Option to consolidate to a single tab per port call.

All allocation data now available in the Cargo Handling grid in one place.

A much more concise report is now available, aggregated per port call.

Take advantage of the latest platform features.
