

At Veson Nautical, client value is the star that guides all that we do. That's why we develop and release more than 500 new features each year to meet the evolving needs of our vast, global client community. Once released, many of these capabilities are automatically added to our dynamic, cloud-native platform where they can benefit clients.

Deactivate unused fuel types on Vessels

As marine fuels evolve with regulations, certain fuels are no longer usable – particularly, low-sulfur fuels on non-scrubber vessels, so now you can hide those fuels while preserving historic reporting and records.

Hide fuels that you don't want to see in operations and chartering. Avoid mistakes, reduce clutter, and focus on what you need to see.

Enhanced Module

Do these enhancements apply to you?

Ask yourself these questions to determine how your organization will benefit from these additions to the Veson IMOS Platform:

- ✓ Do you have fuel types on vessels that aren't being used anymore, that clutter up bunker workflows, and at worst lead to errors?

Challenges

Fuel regulations have made heavier fuel types unusable on non-scrubber fitted vessels, but have been maintained in order to keep historic voyage reporting.

Need to have flexibility to manage hiding/showing of inactive fuel types to avoid mistakes.

Features & Benefits

Mark fuels as inactive, so they are hidden from operational workflows, but remain reportable.

Change is initialized on new voyages, but with the flexibility to hide/show hidden fuel types on past or upcoming voyages.

Take advantage of the latest IMOS Platform features.
