

CAPABILITY SPOTLIGHT

INTEGRATED BI DASHBOARDS

What it Is

Available for installation as an extension of the Analytics module in the IMOS Platform, Veson's Integrated BI Dashboard Library provides 6 pre-made visual reports that present your data in a dynamic, actionable format. Once installed, these reports can be used as-is or used as a foundation for user-customized reports.

Why it Matters

Modern, visual dashboards empower your team to spot trends, identify opportunities, and make better, data-driven decisions. The Integrated BI Dashboard Library makes this visibility readily accessible to you and your team, so you can best utilize the rich data repository that the IMOS Platform has to offer.

With Integrated BI Dashboards, you can:

- Easily access and interact with data to get an overview of what is going on in your organization
- Quickly identify trends and outliers in order to define what is important for the business and make better strategic decisions
- Mark your organization's performance over different target scenarios in order to track and communicate progress and success
- Encourage specific actions in a timely manner

How to Use It

To add BI Dashboards to your toolkit in Analytics, you must first purchase your PowerBI Pro license(s) through Microsoft. To integrate with the IMOS Platform and install dashboards, simply raise a Help Center ticket, and Veson Technical Support will set up your data source connection and provide the requisite files and instructions for installation.

Integrated BI Dashboards

Dashboard Descriptions

Drawing on our nearly two decades of experience providing software and solutions to maritime organizations, the Veson team structured our Integrated BI Dashboards to help you visualize some of the most important aspects of your business. These Dashboards include:

Chartering Performance

Gain instant visibility into the performance of your Chartering team by comparing Actual TCE with the original Estimate by Vessel Type and Chartering Specialist. The *Trend* view enriches this dashboard further with the inclusion of the same metrics from two historical periods, helping to validate your observations of the internal team's performance as well as recent development in market conditions.

Demurrage Amount

Visualize the average demurrage/despatch amount (in USD) per port and cargo type based on completed laytime calculations. Analyze this same information per port and counterparty. Change views to see on a map the ports where laytime calculations occurred, with size and color indications of the demurrage/despatch amount and time in minutes, including the individual amounts per voyage.

Financials Overview

Quickly identify which running voyages are currently impacting your P&L in order to take action in a timely manner, and communicate financial progress and success internally. The *Monthly P&L Breakdown* view helps you easily access and interact with the monthly P&L results, mark your organization's performance across different target scenarios, and assess your position over the market (market data requires Market Data Access license).

Port Delays

See a quick overview of the average delays occurred (in days) before the commencement of cargo operations. Drill down on various parameters such as port, port functions, and cargo types for further analysis. The *Port Delays by Port and Delay Type* view enriches your analysis farther, enabling you to identify busiest ports basis the average port delays (in days) from all voyages with related port calls, drill down the delay time per cargo type, and compare the delays inside the busiest ports.

Trading P&L Stress Test

Understand your Market Risk metrics at a glance with dynamic Net Position, P&L Impact, and absolute P&L visuals. Manage your Market Risk by keeping an eye on the Net Exposure Days and Tons quantities which drive impact of P&L when forward markets are volatile. Freight and Bunker rates are shocked 5 and 10 percent up and down and the simulations for absolute and relative P&L are refreshed every day to give you the most accurate picture of your exposure and sensitivity to the Market by Vessel Type and Contract Type.

Requires the Trading & Risk Module.

Voyage Fixtures

Quickly track and evaluate the size and trends of your Chartering activities over time - by cargo, fixture type, and vessel - in order to easily communicate progress and success in the organization. Easily identify your most frequent partners by type of contracts, cargo, and vessel type in order to define what is important for your business.
