

CAPABILITY SPOTLIGHT

MARKET DATA ACCESS

What it Is

IMOS Market Data Access allows you to import freight and bunker prices and forward curves into your instance of the Veson IMOS Platform to support the use of index-linked vessel and cargo contracts and more accurately estimate TC voyages.

Why it Matters

Index-linked contracts are common in TC voyages, but when rates change daily with the market, they can introduce unnecessary complexity to your voyage management. The right digital tool can manage the updates automatically, so you can spend your time on more meaningful work.

With Market Data Access, you can:

- Link your contract to a specific route or index to automatically calculate price as it fluctuates.
- Bring in spot prices and forward curves that support your index-linked contracts.
- Accurately price your index-linked voyages, for a more accurate P&L.
- Improve efficiency by automatically populating daily price in index-linked contracts.
- Reference market data directly within the voyage estimate P&L for more accurate, in-line calculations.

How to Use It

This functionality requires an additional annual subscription to IMOS Market Data Access. You must have Market Data enabled for you by Veson Nautical and the Market Data Right selected, under "Other" in Data Center.
