

CAPABILITY SPOTLIGHT

VESSEL
VALUATION**What it Is**

In a digital race between your vessels and an industry standard vessel, the Vessel Valuation form enables you to rapidly compare performance across a matrix of estimates, calculating each vessel's Ratio % (correlation) value in seconds.

Why it Matters

Vessel Valuation, which enables you to dynamically compare vessels for a series of estimates, elevates and automates the vessel evaluation and selection process. As a result, you can remove guesswork, improve decision making, and save valuable time.

With Vessel Valuation, you can:

- Accurately evaluate your vessels against one another and an industry benchmark.
- Reduce operational burden and eliminate guesswork in the vessel selection process.
- Optimize selection, choosing the right vessel for every voyage.
- Improve efficiency by automatically populating vessel selections in chartering and operations.

How to Use It

Vessel Valuation requires the Trading & Risk module. You must have Vessel Valuation enabled for you by Veson Nautical and the Vessel Valuation Module Right selected, under Quick Links in Trading.

WHAT CUSTOMERS ARE SAYING

"Vessel Valuation is a gamechanger. We went from manually calculating Ratio % for each of our vessels, across all of our estimates, to having these figures on-hand in seconds. In addition, the effectiveness of our vessel selection process has substantially improved."
