

Voyage Reporting

Seamless connectivity between ship and shore

Increase operational efficiency and maximize profitability with one, centralized dashboard for vessel and voyage data collection, visibility into fleet performance and status, and streamlined voyage form sharing. It's no wonder that approximately 70% of Veson's 21,000+ user community is operating on the Voyage Reporting module.

Custom Vessel Forms

Increase operational efficiency by streamlining your vessel and voyage data collection. With standard, customized vessel forms and fields, your operations team has streamlined access to pertinent vessel information and can eliminate errors, duplicates, and wasted time spent sifting through inboxes.

Fleet Performance

Whether it's your entire fleet or individual voyages, operators can utilize data from vessels, agents, and external partners to visualize and assess voyage performance. Through vessel reports and built-in BI dashboards, operators can track actual voyage results against estimates for enhanced visibility into business operations.

Data Sharing

Build trust with counterparties by delivering timely, pertinent updates on ETA, speed, fuel consumption, port congestion, weather, and more. By streamlining the sharing of noon reports, statements of facts, and other voyage forms, operators can keep internal and external stakeholders informed with ease.

Voyage Reporting has given us a solid, user-friendly platform to collect and store the data from the reports and also share the information seamlessly both inside and outside our organization.

Nicholas Green, LNG Operations & HSE, Leif Höegh (U.K.) Limited

Enhance the value of your Veson IMOS Platform system with the **Voyage Reporting** module.
