

IMOS Platform + Position List

Enhance your pre-fixture decision-making with Veson's IMOS Platform™ and Position List for Principals™

Position List for Principals is a standalone solution designed to elevate tanker voyage planning by helping individual principals and entire departments manage their fleet in the context of the changing market. With AIS position data and searchable position list views, Position List for Principals provides a central access point to easily track fleet and global tonnage supply.

Now, imagine if you could merge insights on tonnage movements from the operations team directly into chartering position lists without the need for email scraping, best guesses, or jumping between systems and spreadsheets. A native integration between Position List for Principal and the IMOS Platform allows organizations to do just that. The integration provides the contextual decision-making support you need to meet sustainability demands, increase efficiency, and gain a competitive edge.

With the IMOS Platform and Position List for Principals, you can:

Streamline communication between operations in the IMOS Platform and your chartering position lists.

Track, visualize, and report on market fixture activities.

Compare cargo operations to the market with tonnage supply trends and historical data.

See current and upcoming availability with predictive search capabilities.

Customize data formats based on your own preferences.

Send quick reports of open position to relevant stakeholders.

Work on the go with the mobile app for Position List for Principals.

Clients we are proud to serve:
