

Oceanbolt

Robust market insight to shape stronger decisions

Decision makers on all sides of the marine contract require access to high-integrity market data that can be integrated into their workflows to inform market strategies, trade decisions, turnaround projections, freight assumptions, and more. Specialized in the requirements of bulk commodities, Oceanbolt's dynamic data intelligence platform delivers accurate, timely data to help navigate port congestion and elevate turnaround analysis.. These insights are delivered in an intuitive and accessible format, empowering key stakeholders to readily transform them into more informed and impactful decisions.

With Oceanbolt, you can:

Effectively manage contracts, contain costs, and enhance profitability with real-time and historical insights on commodity trade flows, freight tonnage flows, vessel positions, port congestion, and turnaround times.

Make advanced calculations in seconds with a best-in-class AIS processing engine and proprietary geospatial database of port and berth polygons.

Leverage pre-configured dashboards with up-to-date analyses on supply and demand for specific commodity types and grades in different regions of the world.

Feed Oceanbolt data into other systems and combine with other data sources to create custom insights that support your unique business initiatives and competitive strategies.
