Position List

Unlocking more efficient and effective broking

Designed specifically to address ship broking's unique complexities, Position List for Brokers streamlines the broking process with seamless access to high-quality data. A collaborative tool that allows tanker brokers to identify commercially available tonnagevessels for their client's needs, Position List for Brokers is built to share position lists securely and intentionally from anywhere and from any device.

With Position List for Brokers, you can:

❯ **Combine AIS, vessel, and position search criteria** in one place to get a full view of commercially available tonnage.

❯ **Visualize current and historical vessel tracking information** via the map tool, with the ability to calculate ETA and more.

❯ **Maintain total control** with the ability to enter data and keep it private or share with selected partners. Easily compare intakes across multiple vessels on a given draft and density.

❯ **Advise clients on the supply landscape** for any given cargo with predictive search.

❯ **Track tonnage supply trends** over time based on geography and vessel.

❯ **Estimate CO$_2$ and EEOI** on a ship-by-ship basis, based on open positions, estimated consumption, distance traveled, and other criteria.

❯ **Easily configure custom export formats** based on your demands, without any third-party support needed.

❯ **Record fixtures faster** with accurate information that is updated daily.

❯ **On-the-go capabilities** available through the app

> Making the switch to the Position List [for Brokers] has been a great decision for us. The speed and simplicity of the position list allows us to quickly and easily analyze the market and respond to our principals with the best suitable vessels for their cargoes.
