

The industry standard for tanker information management

Information sharing across owners, operators, charterers, and brokers is critical to the success of chartering and vetting workflows. With most of the global tanker industry on Q88, it captures industry changes as they happen and enables users to respond with the greatest possible agility. Capable of running on any device, Q88 consistently delivers complete and accurate information in an intuitive and highly useful format.

Manage critical vessel information on a platform you can trust.

Collect, manage, store, and share high-quality tanker information in a simple yet powerful interface.

With Q88, you can:

Centrally manage documentation and questionnaires and seamlessly share data.

Establish a single source of truth for critical vessel information.

Automatically complete questionnaires to prevent errors and delays.

Streamline certificate management through automation.

Record your inspections and associated observations and analyze your vessels against industry benchmarks.

Maintain up-to-date crew information with OCIMF compliant Officer Matrix.

Improve communications between charterers, brokers, and agents.

Maintain an accurate audit trail to effectively track changes over time.

Clients we are proud to serve:

Hafnia
